Introduction

Wellbeats *Wellness*, a product of LifeSpeak Inc., provides clients with a set of primary required fields as well as a range of options when determining the specific configuration of the Eligibility File (EF). This document provides information about minimum requirements and various configuration options. During implementation, the Wellbeats *Wellness* team will work with the client to determine the best configuration.

Eligibility Files are the mechanism that Wellbeats *Wellness* uses to determine client fees and to give members access to the Wellbeats *Wellness* product.

Member Creation & Deactivation

- Eligibility files control member access to Wellbeats *Wellness* by creating, maintaining, and deactivating member accounts.
- Every EF, including the initial launch file and all subsequent update files, must be FULL files containing all eligible members.
- Existing member accounts are deactivated by omission from a new eligibility file. Upon upload of a new EF, user accounts no longer on the file are automatically deactivated.
- Partial EF files should not be sent as existing member accounts are deactivated when omitted from any EF.

Secure File Transfer

Wellbeats *Wellness* utilizes MoveIT™ a Managed File Transfer (MFT) software to securely receive and share files with clients. The Wellbeats *Wellness* MFT offers both a user-friendly web interface as well as an SFTP option.

Please note Wellbeats *Wellness* does NOT accept eligibility files via email or pick-up eligibility files from external sites.

Wellbeats *Wellness* will provide **one** client contact with credentials to access the secure MFT platform.

ENCRYPTION

- Wellbeats *Wellness* does not require file encryption, but provides the option to clients.
- File encryption is available offered in transit and at rest.
- Encrypted files require additional information, including IP address(es) for whitelisting and a PGP Encryption Key.
- Credentials and PGP Encryption Key for encrypted files are shared via encrypted email during implementation.

MOVEit complies with PCI, HIPAA, CCPA, GDPR, SOC 2 type 2, ISO 27001, SOX, BASEL I/II/III, FIPS, FISMA, GLBA, FFIEC, ITAR, and other data privacy regulations. Additional supporting documentation may be provided on request.

Initial Eligibility File Configuration Process

Wellbeats *Wellness* allows for client specific configuration on certain data elements within the eligibility file. During implementation, the Wellbeats *Wellness* team will review and consult with the client to complete the initial file configuration.

The Wellbeats *Wellness* Eligibility File Configuration Details Form will be used to document the client specific configuration and capture important details related to file cadence, contacts, and other specifications.

The following are examples of configuration components that will be discussed:

REPORTING

- Eligibility Files support reporting and can expand or limit what is available in client reports.
 - Demographic reports will only reflect values (age & gender) that are provided to Wellbeats *Wellness* from the client in the eligibility file.
 - Wellbeats *Wellness* does not provide reporting on demographic data that has been provided by the member to Wellbeats *Wellness* in their personal profile.

MEMBER LOGIN EXPERIENCE

- When email addresses are not available for all eligible members, Wellbeats *Wellness* can use additional fields to provide an alternative login method.

ELIGIBLE POPULATION

- Additional fields are required when spouse/dependents and/or global employees are eligible.

After initial consultation, Wellbeats *Wellness* will complete the File Configuration Details Form and share with the client. The client is expected to review and confirm alignment via email. After the document has been agreed to, a test file will need to be provided.

TEST FILE REQUIREMENTS

- A test file must be provided to Wellbeats *Wellness* 10 business days prior to launch.
- The Wellbeats *Wellness* team will review and provide any necessary feedback. A secondary test file may be required to confirm client's and Wellbeats *Wellness*' requirements will be met.
- Naming convention is required and will be identified on the Wellbeats *Wellness* Configuration Details Form.

PRODUCTION FILE REQUIREMENTS

- A production file must be provided to Wellbeats *Wellness* a minimum of 5 business days prior to launch date.
- Naming convention is required and will be identified on the Wellbeats *Wellness* Configuration Details Form.

Eligibility File Specifications

PROPERTY	DETAILS
Encryption	Wellbeats <i>Wellness</i> does not require files to be encrypted.
Test File Naming Convention	TEST_Clientname_Eligibility_MMDDYYYY.csv
Production File Naming Convention	Clientname_Eligibility_MMDDYYYY.csv
Header Row	A header row is required and shall align with agreed upon field values in the Wellbeats <i>Wellness</i> EF Configuration Details Form. Field Names must be exact match (spacing, case)
File Format Options	.csv or .txt
Field Delimiter Options	Standard: Comma, Optional: Pipe, Tab, Colon
Character Encoding	UTF-8
Double Quote Field Enclosure	No

Eligibility File Standard Rules

1. The Eligibility File may contain only one record per user.
2. Email:
 - a. Emails must be unique (no duplicates).
 - b. Spaces are not allowed in the Email field.
3. Unique ID:
 - a. Value must be unique for each user (no duplicates).
 - b. Value must be non-publicly identifiable.
 - c. The Unique ID is set upon account creation via the eligibility file. It cannot be viewed or changed by the member.
 - d. Subsequent eligibility files do NOT update the Unique IDs.
 - e. Unique IDs must remain the same after account creation. Clients are required to notify Wellbeats *Wellness* if this value is changing for any member prior to the change appearing in the eligibility file.
4. Username:
 - a. Values in the Username field must be unique for each user (no duplicates).
5. Passwords:
 - a. Pre-set Passwords must contain all or a portion of the client's name or other unique factor.
 - b. Members are required to create a unique password at first login.
6. Clients are required to provide clean Eligibility Files.
 - a. Errors will not be loaded into the Wellbeats *Wellness* database and will result in member access issues.
 - b. Some errors may inhibit the entire file from being loaded.

Data Layout Table

	FIELD NAME	FIELD VALUE/DESCRIPTION	DATA TYPE FORMAT LENGTH	ALLOW NULL/BLANK
Required Fields	First Name	The user's first name. No commas.	Long Text Alpha 1-100	No
